Research Advising Experience for MSU Undergraduate Students

Jadyn Elster *May 2026–present*

Analyzing long-term monitoring optical spectra of an evolved massive star with a hidden compact object companion. Jadyn is co-author of a manuscript in preparation.

Andrew Harms *May 2025–present*

Combined archival X-ray and radio data to constrain the prevalence of radio/optical nebulae associated with ultraluminous X-ray sources. Made an independent discovery of a new nebula and analyzed a follow-up optical spectrum I obtained with the Gemini Fast-Turnaround program. Andrew is preparing a manuscript for first-author publication.

Subhroja Roy (now U. Notre Dame Nuclear Astrophysics Ph.D. student) *May 2024–May 2025*

Combined archival γ-ray, X-ray and optical data to identify several strong candidate spider MSPs and analyzed follow-up optical spectroscopy. Completed astronomy senior thesis presenting two new candidate binary MSPs, one of which has been published with Subhroja as second author and the other is to be included in an upcoming publication.
